

METHOD AND APPARATUS FOR DYNAMIC GROUP ADDRESSING

Abstract

5 A method (600) of dynamic group addressing in a digital audio
receiver unit (28) includes the steps of receiving (602) a plurality of
messages broadcast to a digital audio receiver among a plurality of digital
audio receivers and receiving (604) at least one environmental input at the
digital audio receiver. The method further includes the step (608 and 612)
10 of selectively decoding at least one of the plurality of messages broadcast
based on a selective call address and at least one environmental input
received at the digital audio receiver.
